

INDUSTRIAL OT / IT BRIDGE

PLC data to IT with cryptographic proof of every value.

Signed. Audited. Tamper-evident. Built for utilities, district heating, and industrial production.

MOFF reads. It never writes to your OT network.

If MOFF stops, your plant does not notice. Fails safe by design. No agents, no firmware changes, no SCADA changes.

THE PROBLEM MOFF SOLVES

"Your operator still exports CSV manually."

The data exists on the plant floor. It never leaves without a human touching it.

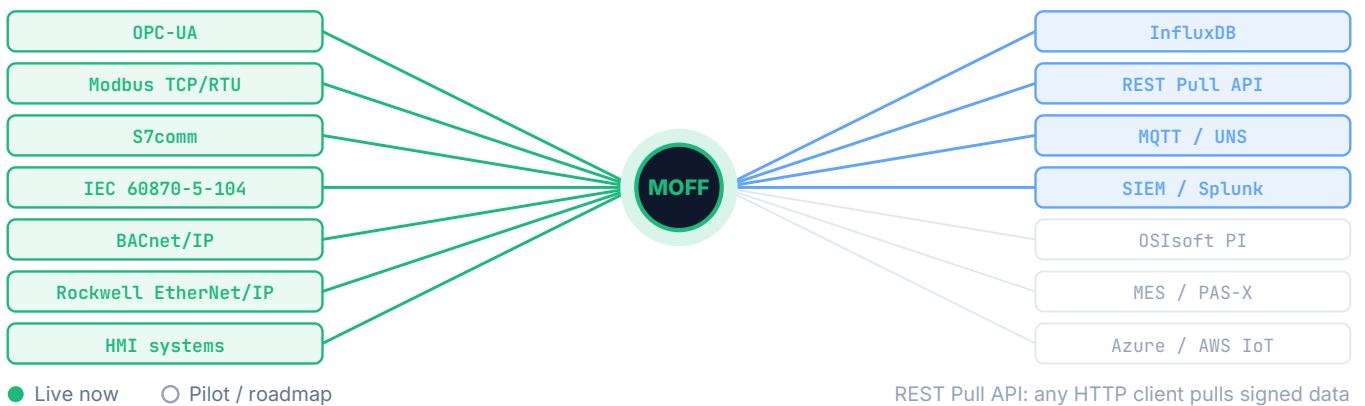

"Who changed that setpoint at 03:17?"

No tamper-proof audit trail. Authorities want cryptographic answers.

"4 vendors. 4 contracts. None of them talk."

Aggregator, historian, integrator, consultant. No shared audit trail.

ONE BRIDGE. EVERY SOURCE. EVERY DESTINATION.

HOW IT WORKS: SIX STEPS, EVERY 10 SECONDS

Every datapoint becomes an ECDSA-signed SHA-256 block in a dual audit chain. Tamper is mathematically detectable. Not a policy, a proof.

COMPLIANCE POSTURE

- + **NIS2-ready audit trail:** one-click incident evidence: signed chain, config, CSV, standalone verifier in a single ZIP.
- + **21 CFR Part 11 e-signatures by design:** every equipment-layer intervention signed with identity, timestamp, source IP.
- + **ALCOA+ data integrity by design:** attributable, legible, contemporaneous, original, accurate. Verified on every read.

PRICING (DKK PER YEAR, EXCL. VAT)

Essentials	5 PLCs, 2 destinations	49.000
Professional	15 PLCs, 5 destinations	119.000
Enterprise	Unlimited PLCs and destinations, fair use	249.000
GMP (coming 2027)	21 CFR Part 11, pharma, unlimited	349.000

Onboarding 35.000 DKK fixed price, any tier, remote. On-site deployment: fixed quote. Multi-year discounts: ask us. Everything included in every plan. Add-ons on request: Priority Support, Trend History, custom connectors.

See MOFF live: book a demo.

Real PLC data: collected, signed, audited. No slides.
